Language as a symbolic system

table

Language as a symbolic system

Non-random co-occurrence

- ▶ Mary has baked biscuits and muffins for the family on Christmas day
- ▶ Ball the idea after flew nice a chemist

Non-random co-occurrence

Number of co-occurrences		
dog	cat	7927
	walk	2356
	collar	612
	fox	252
	bear	73
	pizza	10

Islands of regularity **within** words

- ▶ Dealer
- ▶ Payer
- ▶ Seeker
- ▶ Learner
- ▶ Killer
- ▶ Holder

A breach into arbitrariness

Far away from perfect predictability

Vessel
Jewel
Tunnel

Whisper
Never
Corner
Mother

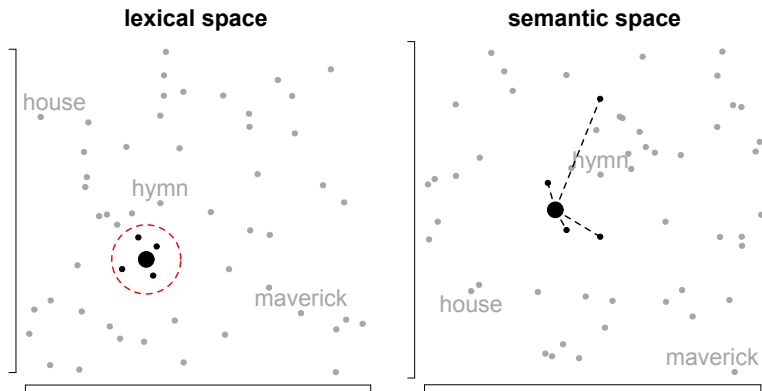

Darker
Larger

The core question

Despite its **fundamental arbitrariness**, language does feature **regularities** that are **probabilistic** in nature.

Does the brain pick up on these regularities?

Orthography–Semantic Consistency (OSC)

OSC, mathematical formulation

$$OSC(t) = \frac{\sum_{x=1}^k f_{r_x} \cos(\vec{t}, \vec{r_x})}{\sum_{x=1}^k f_{r_x}}$$

(Marelli et al., 2015)

A morphological take

CORN

- ▶ corns
- ▶ corner
- ▶ cornwall
- ▶ cornish
- ▶ ...

but not

- ▶ torn
- ▶ cork
- ▶ ...

A consistent space

lexical space

semantic space

An inconsistent space

lexical space

semantic space

Three experiments

- ▶ Identification times on isolated words
- ▶ Proficiency in L2
- ▶ Brain electrophysiology during sentence reading

Lexical decision

(Balota et al., 2007)

OSC gets unique variance

Table 6. *Results of the regression analysis on the lexical decision latencies extracted from the BLP for a large set of random words*

	<i>Estimate</i>	<i>Std error</i>	<i>t value</i>	<i>p value</i>
Intercept	6.5922	.0109	602.89	.0001
Word frequency	−0.0308	.0009	33.41	.0001
Word FS	−0.0041	.0021	1.97	.0495
Word length	0.0035	.0013	2.74	.0061
OSC	−0.0254	.0066	3.84	.0002

(Marelli et al., 2015)

OSC tracks language learning

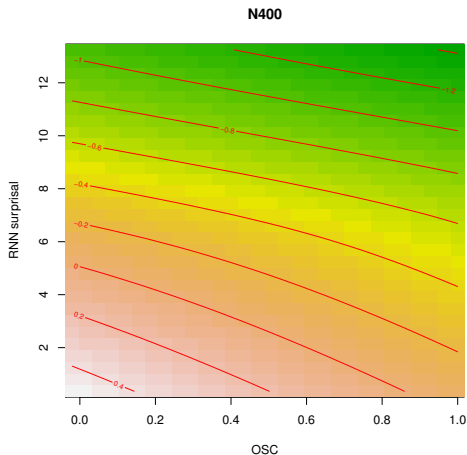

OSC tracks language learning

(Viviani and Crepaldi, 2018)

OSC explains brain electrophysiology

(Crepaldi et al., 2018; Frank et al., 2015)

Sum up of the data

- ▶ Words are recognized more quickly if they live in a consistent part of the lexical-semantic network
- ▶ People become more sensitive to consistency as their proficiency in a language grows
- ▶ Consistency affects word identification on-line during the processing of connected speech

The broader message

The brain does code for consistency in the lexical system

Predictive coding?

Implications

Morphology

From a finite set of well-defined objects and operations, to part of a more general and probabilistic form-to-meaning mapping effort carried out by the brain

Language Evolution

Brain counterpart of the emergence of structure in the cultural evolution of language (Kirby et al., 2008)

Language

General-purpose learning mechanisms subserve linguistic processing (Ellison, 2013)

Acknowledgments

Statistical Learning and Language

(in spite of arbitrariness)
